

CONVERGE FINANCE

convergefi.com

PRODUCT REQUIREMENTS DOCUMENT

Enterprise Website — Complete Specification

Document Type	Product Requirements Document (PRD)
Product	convergefi.com — Enterprise Marketing Website
Version	1.0
Date	April 2026
Status	Draft for Review
Prepared By	Venturizer Product Leadership Team
Classification	Confidential — Internal Use Only

1. Executive Summary

This PRD defines the complete specification for the Converge Finance enterprise marketing website (convergefi.com). The website serves as the primary digital front door for enterprise real estate lenders evaluating the Converge AI Credit Intelligence Platform.

Converge Finance operates six AI agents that automate and enhance the commercial real estate lending workflow: Triage, Credit Intelligence, Policy Match, Entity Review, Background Report, and Comps. The website must position these as a unified platform, not as six point solutions, while providing sufficient depth on each agent to satisfy technical and operational buyers.

1.1 Project Objectives

- **Primary:** Convert enterprise lending decision-makers from awareness to qualified demo requests.
- **Secondary:** Establish Converge as the category-defining brand in AI-powered credit intelligence for real estate lending.
- **Tertiary:** Build a durable SEO and AEO content engine that compounds organic traffic over time.

1.2 Success Criteria

Metric	Target (6 Months)	Target (12 Months)
Demo Requests / Month	10 qualified requests	30 qualified requests
Organic Traffic	2,000 monthly sessions	10,000 monthly sessions
Avg. Time on Site	> 1 minutes	> 2 minutes
Bounce Rate (Platform Pages)	< 45%	< 35%
AEO Citations	Appear in 10+ AI-generated answers	Appear in 50+ AI-generated answers
Page Load (LCP)	< 1.5 seconds	< 0.8 seconds
SEO Domain Rating	DR 25+	DR 45+

1.3 Target Audience

The website targets four distinct buyer personas within US real estate lending institutions:

Persona	Title Examples	Primary Concern	Content Need
Credit Decision Maker	VP of Credit, Chief Credit Officer, Head of Underwriting	Risk accuracy, compliance, audit readiness	Agent capabilities, accuracy metrics, compliance features
Operations Leader	VP of Operations, COO, Head of Loan Operations	Processing speed, volume capacity, workflow efficiency	Platform workflow, integration architecture, time savings

Technology Buyer	CTO, VP of Engineering, IT Director	Security, integration, data governance, AI reliability	Security page, API docs, deployment model, AI governance
Executive Sponsor	CEO, President, Managing Partner	Competitive advantage, ROI, market positioning	Case studies, ROI metrics, platform vision

1.4 Scope Definition

In Scope: Customer-facing marketing website including all public pages, blog infrastructure, resource center, demo booking flow, SEO/AEO optimization, analytics instrumentation, and CMS integration.

Out of Scope: Product application (agent UI/dashboard), customer portal, API documentation portal, internal operational tools, CRM backend, billing systems.

2. Information Architecture

The sitemap is organized around three structural principles: (1) Platform-first positioning that presents six agents as one unified system, (2) vertical-specific solution pages that speak each lending segment's language, and (3) a content engine (resources + glossary) optimized for both traditional SEO and AI answer engine visibility.

2.1 Complete Sitemap

URL Path	Page Name	Purpose	Primary Persona
/	Homepage	Primary landing, conversion hub	All personas
/platform/overview	Platform Overview	System architecture and workflow	Ops Leader, Tech Buyer
/platform/triage	Agent: Triage	Document classification and extraction	Ops Leader, Credit DM
/platform/credit-intelligence	Agent: Credit Intelligence	Deep interlinked risk analysis	Credit DM
/platform/policy-match	Agent: Policy Match	Automated credit guideline compliance	Credit DM, Ops Leader
/platform/entity-review	Agent: Entity Review	Entity structure compliance review	Credit DM
/platform/background-report	Agent: Background Report	Background report risk analysis	Credit DM
/platform/comps	Agent: Comps	Property comparable benchmarking	Credit DM, Ops Leader
/solutions/bridge-lending	Solution: Bridge Lending	Vertical-specific positioning	All personas
/solutions/construction-lending	Solution: Construction Lending	Vertical-specific positioning	All personas
/solutions/cre-term-lending	Solution: CRE Term Lending	Vertical-specific positioning	All personas
/solutions/dscr-lending	Solution: DSCR Lending	Vertical-specific positioning	All personas
/solutions/hard-money-lending	Solution: Hard Money Lending	Vertical-specific positioning	All personas
/customers	Customer Stories Hub	Social proof and case studies	Exec Sponsor, Credit DM
/customers/[slug]	Individual Case Study	Detailed customer story	All personas
/resources	Resources Hub	Content marketing center	All personas

/blog	Blog	Thought leadership and SEO	All personas
/blog/[slug]	Blog Post	Individual articles	All personas
/resources/guides	Guides Library	Gated long-form content	Ops Leader, Credit DM
/resources/guides/[slug]	Individual Guide	Downloadable guide	Ops Leader, Credit DM
/resources/webinars	Webinars	Event and on-demand library	All personas
/resources/reports	Industry Reports	Data and benchmark reports	Exec Sponsor, Credit DM
/glossary	Glossary Hub	AEO-optimized definitions	All (via search)
/glossary/[slug]	Glossary Term	Individual term definition	All (via search)
/security	Security and Compliance	Enterprise trust center	Tech Buyer, Exec Sponsor
/pricing	Pricing	Pricing model and tiers	Ops Leader, Exec Sponsor
/demo	Book a Demo	Primary conversion page	All personas
/company/about	About Converge	Team, mission, story	Exec Sponsor
/company/careers	Careers	Job listings	N/A
/company/newsroom	Newsroom	Press and announcements	All personas
/company/contact	Contact	Direct contact information	All personas
/legal/privacy-policy	Privacy Policy	Legal compliance	Tech Buyer
/legal/terms-of-service	Terms of Service	Legal compliance	Tech Buyer
/legal/security-policy	Security Policy	Legal compliance	Tech Buyer

2.2 Navigation Structure

Primary Navigation (Global Header)

The global header appears on every page and contains five primary navigation items plus two CTAs:

Nav Item	Dropdown Content	Behavior
Platform	Overview link + 6 agent cards with icons and one-line descriptions	Mega-menu dropdown with visual cards
Solutions	5 lending vertical links with brief descriptions	Standard dropdown menu
Customers	Direct link (no dropdown)	Navigates to /customers
Resources	Blog, Guides, Webinars, Reports as sub-links	Standard dropdown menu

Pricing	Direct link (no dropdown)	Navigates to /pricing
[CTA] Book a Demo	Primary CTA button (teal)	Navigates to /demo
[CTA] Log In	Secondary text link	Navigates to product app login

Footer Navigation

Four-column layout with the following structure:

- **Column 1 — Platform:** Overview, Triage, Credit Intelligence, Policy Match, Entity Review, Background Report, Comps
- **Column 2 — Solutions:** Bridge Lending, Construction Lending, CRE Term Lending, DSCR Lending, Hard Money Lending
- **Column 3 — Resources:** Blog, Guides, Webinars, Reports, Glossary
- **Column 4 — Company:** About, Careers, Newsroom, Contact, Security

Footer also includes: copyright notice, Privacy Policy link, Terms of Service link, SOC 2 badge, and social media icons (LinkedIn at minimum).

3. Page-by-Page Specifications

Each page specification includes: URL, purpose, SEO target keyword, AEO target question, ordered content blocks, and relevant technical notes.

3.1 Homepage

Homepage

URL	/
Purpose	Convert cold traffic into engaged prospects within 10 seconds. Establish what Converge is, who it serves, and why it matters.
SEO Target	AI credit intelligence platform real estate lenders
AEO Target	What is AI-powered credit analysis for commercial real estate lending?

Content Blocks (in order):

- **1. Hero Section:** Single headline communicating core value proposition. Sub-headline expanding the platform promise. Primary CTA (Book a Demo) and secondary CTA (See the Platform). Background: abstract data visualization or subtle animation. No stock photos of handshakes. Headline must answer: what does this do for me?
- **2. Social Proof Bar:** Horizontal strip of customer logos (minimum 4). If insufficient logos at launch, use credibility metrics: loan volume processed, number of lenders, or an attributed customer quote. Grayscale logos, color on hover.
- **3. Problem Statement Section:** 3-4 pain points real estate lenders face today, written in their language. Each pain point is a short paragraph, not a bullet. These mirror the exact questions lenders ask, optimized for AEO. Example: manual credit memo assembly taking 4-6 hours, inconsistent policy application across loan officers, entity structures buried in hundreds of pages.

- **4. Platform Overview Visual:** Interactive or animated workflow diagram showing how data flows through the six agents. Entry point: documents arrive. Output: credit intelligence, risk flags, comp analysis. This is the one platform, not six tools moment. Should convey the system architecture in under 5 seconds visually.
- **5. Agent Highlight Cards:** Six cards in a 3x2 or 2x3 grid. Each card contains: agent icon, agent name, one-sentence description, and a link to the dedicated agent page. Cards should be visually distinct but share a common design language.
- **6. Solution Preview:** 2-3 solution cards showing lending verticals (bridge, construction, CRE term). Each links to its vertical-specific page. Headline: Built for how you lend.
- **7. Featured Case Study:** One named customer story with a specific, quantified result. Format: customer logo, one-sentence challenge, one-sentence outcome, key metric callout (e.g., 70% reduction in credit memo turnaround), link to full case study.
- **8. Trust and Security Strip:** SOC 2 badge, encryption standard, compliance mention, bank-grade security messaging. Single row. Addressed to the CTO persona.
- **9. Final CTA Section:** See Converge in Action headline. Brief description of the demo experience. Demo booking button. Optionally: Watch a 2-minute overview video link.

Technical Notes:

- Hero section must render above the fold on 1440px and 1920px viewports.
- Platform overview visual must degrade gracefully to a static image on slow connections.
- All CTA buttons must fire analytics events with source attribution.
- Implement Organization schema and WebSite schema markup.

3.2 Platform Overview

Platform Overview

URL	/platform/overview
Purpose	Give buyers a complete picture of the platform architecture, workflow, and value proposition before drilling into individual agents.
SEO Target	AI underwriting platform commercial real estate
AEO Target	How does AI underwriting automation work for commercial real estate loans?

Content Blocks (in order):

- **1. Platform Narrative:** 2-3 paragraphs explaining the Converge platform thesis: why credit intelligence requires an integrated system, not point solutions. Written for the VP of Credit and CTO simultaneously. Should answer: why a platform, and why now?
- **2. End-to-End Workflow Visualization:** Full-page workflow diagram showing the loan lifecycle through Converge. Steps: document intake, classification (Triage), data extraction, policy compliance (Policy Match), entity review, background analysis, property comparable analysis (Comps), risk synthesis (Credit Intelligence), credit memo output. Interactive hotspots link to each agent page.

- **3. Six Agents Overview Grid:** Detailed cards for each agent. Each card: icon, name, 2-3 sentence description, 3-4 key capabilities, and CTA to agent detail page. Arranged to show logical workflow sequence.
- **4. Integration Architecture Section:** Diagram showing how Converge connects to existing lending tech stacks: LOS systems (Encompass, BytePro, custom), document management, CRM, data providers. API-first architecture messaging. Highlight that Converge augments existing workflows, does not replace them.
- **5. AI and Data Approach:** How models are trained, accuracy metrics, human-in-the-loop architecture, continuous improvement. Written for the CTO but accessible to the CCO. This section is a trust-builder and must avoid vague AI marketing language. Specific claims require backing.
- **6. Deployment Model:** Cloud deployment details, data residency, implementation timeline, onboarding process. Target: 4-6 week implementation for standard deployments.
- **7. Platform CTA:** Book a platform demo with a note: We will walk you through the full workflow with your own sample documents.

Technical Notes:

- Workflow visualization must be an interactive SVG or React component, not a static image.
- Implement Product schema markup for the platform.
- Page should support deep-linking to specific agent sections via anchor tags.

3.3 Agent Detail Pages (Template)

Six pages follow this template. Each page has unique content but a consistent structure. This ensures buyers can compare agents and navigate predictably.

Agent Page Template Structure

Agent Page Template

URL	/platform/[agent-slug]
Purpose	Demonstrate the specific value, capabilities, and workflow of a single agent to a buyer evaluating that capability.
SEO Target	See per-agent keyword table below
AEO Target	See per-agent AEO question table below

Content Blocks (in order):

- **1. Agent Hero:** Agent name, icon, one-line description. Sub-headline that positions this agent within the broader platform workflow. Badge indicating: Available Now.
- **2. Problem Statement:** The specific pain point this agent solves, described in the lender's language. Not generic AI benefits: the exact workflow bottleneck, compliance gap, or accuracy problem. 2-3 paragraphs.

- **3. How It Works:** 3-5 step visual walkthrough. Each step: number, title, 2-sentence description, and an illustrative visual (screenshot, diagram, or annotated example). This section must make the buyer feel like they understand the product before they see it.
- **4. Key Capabilities:** 4-6 capability blocks. Each: icon, title, one-paragraph description. These are the features that matter, described by outcome, not by technology.
- **5. Example Output:** A redacted or synthetic example of what the agent produces. For Triage: classified document list with extraction results. For Credit Intelligence: risk summary with cross-referenced findings. For Comps: comparable property table with valuation range. This section is critical for enterprise buyers who need to see the deliverable.
- **6. Integration Points:** Where this agent connects to the broader platform and to external systems. Input sources, output destinations, API endpoints if relevant.
- **7. FAQ Section:** 4-6 questions specific to this agent. Written for AEO: clear, declarative answers that AI engines can extract and cite. Must use FAQ schema markup.
- **8. Related Agents:** Cross-links to agents that work alongside this one in the typical workflow. E.g., Triage page links to Credit Intelligence and Policy Match.
- **9. Agent CTA:** See [Agent Name] in Action with demo booking link. Secondary: Back to Platform Overview.

Technical Notes:

- Each agent page must implement FAQ schema markup for AEO.
- Example output section must use synthetic/redacted data only.
- Agent pages must share a common React component template for consistency.
- Each page must include breadcrumb navigation: Home > Platform > [Agent Name].
- Implement BreadcrumbList schema markup.

Agent-Specific SEO and AEO Targets:

Agent	Primary SEO Keyword	Primary AEO Question
Triage	AI document classification lending	How can AI automate loan document classification?
Credit Intelligence	AI credit risk analysis real estate	What is AI-powered credit risk analysis for CRE?
Policy Match	automated credit policy compliance	How does automated credit policy matching work?
Entity Review	entity structure review commercial lending	How to automate entity review in commercial lending?
Background Report	AI background check analysis lending	How can AI analyze background reports for lending?
Comps	automated property comparable analysis	How does automated property comparable analysis work?

3.4 Solution Pages (Vertical-Specific)

Two pages, one per lending vertical. These are the SEO and AEO workhorses. Each targets a specific lending audience with language, pain points, and use cases native to that segment. Content must not be a re-skin of the same generic page: each vertical has distinct challenges.

Solution Page Template Structure

Solution Page Template

URL	/solutions/[vertical-slug]
Purpose	Convert a lending vertical buyer who is searching for AI solutions specific to their lending type.
SEO Target	See per-vertical keyword table below
AEO Target	See per-vertical AEO question table below

Content Blocks (in order):

- **1. Vertical Hero:** Headline that names the vertical explicitly: AI-Powered Credit Intelligence for Bridge Lenders. Sub-headline addressing the primary pain point of this vertical. Primary CTA: See a Demo for [Vertical] Lending.
- **2. Vertical-Specific Pain Points:** 3-4 challenges unique to this lending type. Bridge lenders care about speed and property condition risk. Construction lenders care about draw schedules and completion risk. DSCR lenders care about rental income validation and property comp accuracy. Write in the vertical's own language.
- **3. Agent Relevance Map:** Which of the six agents matter most for this vertical and why. Not all agents are equally important for every vertical. Prioritize and explain the workflow in this vertical's context. Visual: simplified workflow diagram for this vertical.
- **4. Vertical Workflow Walkthrough:** Step-by-step: how a loan in this vertical moves through Converge. From application to credit memo. Include typical document types, compliance checks, and risk signals specific to this vertical.
- **5. Metrics and Outcomes:** Time savings, accuracy improvements, volume capacity gains. Use real numbers if available. If projections, label clearly. Format: large metric callouts with supporting context.
- **6. Case Study Snippet:** If available for this vertical: a condensed case study (logo, challenge, outcome, key metric). If not yet available, omit this block entirely. Do not use generic placeholders.
- **7. Vertical FAQ:** 4-6 questions specific to AI adoption in this lending type. Written for AEO. Schema-marked.
- **8. Vertical CTA:** See How Converge Works for [Vertical] Lending with demo booking. Secondary: Compare All Solutions link back to /solutions hub or /platform/overview.

Technical Notes:

- Each vertical page must have genuinely distinct content. Content overlap between verticals should be < 20%.
- FAQ schema required on every vertical page.
- Each page must include breadcrumb: Home > Solutions > [Vertical Name].

- Pages must support future vertical additions without restructuring navigation.

Vertical-Specific SEO and AEO Targets:

Vertical	Primary SEO Keyword	Primary AEO Question
Bridge Lending	AI bridge lending underwriting	How can AI speed up bridge loan underwriting?
Construction Lending	AI construction loan analysis	How does AI help manage construction lending risk?
CRE Term Lending	AI commercial real estate lending	How is AI transforming commercial real estate lending?
DSCR Lending	AI DSCR loan underwriting	How can AI automate DSCR loan analysis?
Hard Money Lending	AI hard money lending technology	What AI tools exist for hard money lenders?

3.5 Customer Stories

Customers Hub Page

Customer Stories Hub

URL	/customers
Purpose	Provide social proof through named customer stories with quantified results. Enterprise lending buyers are conservative: they need peer validation.
SEO Target	AI lending platform customer results
AEO Target	Which lenders are using AI for credit analysis?

Content Blocks (in order):

- **1. Hub Hero:** Headline: How Lenders Use Converge to Transform Credit Intelligence. Brief narrative paragraph.
- **2. Filter Bar:** Filter case studies by: lending vertical, company size (assets under management), and primary agent used. Filters persist in URL parameters for shareability.
- **3. Case Study Grid:** Cards in 2-3 column grid. Each card: customer logo, customer name, lending type tag, one-sentence result, key metric callout, Read Story CTA.
- **4. Aggregate Metrics Section:** 3-4 large metric callouts showing aggregate results across all customers. E.g., Total loan volume processed, Average time savings, Number of institutions.
- **5. CTA:** Want results like these? with demo booking link.

Technical Notes:

- Launch with minimum 2-3 real, named case studies. Do not pad with anonymized fillers.
- Case study cards must lazy-load images for performance.
- Filter state must be reflected in URL for SEO and shareability.

Individual Case Study Template

Individual Case Study

URL	/customers/[customer-slug]
Purpose	Tell a specific, credible customer story that a prospective buyer can see themselves in.
SEO Target	[Customer Name] Converge Finance case study
AEO Target	How does [Customer Name] use AI for lending?

Content Blocks (in order):

- **1. Customer Header:** Customer logo, name, lending type, AUM or volume indicator. Hero image if available.
- **2. Challenge Section:** 2-3 paragraphs describing the specific operational or risk challenge the customer faced before Converge. Written as a narrative, not a bullet list. Must be specific enough that a peer lender recognizes the pain.
- **3. Solution Section:** Which agents were deployed, how they were integrated, what the implementation looked like. Timeline and scope of deployment.
- **4. Results Section:** Quantified outcomes with before-and-after comparisons. Format: large metric callouts (e.g., 73% reduction in credit memo assembly time) supported by contextual paragraphs. Minimum 3 quantified metrics.
- **5. Quote Block:** Named stakeholder quote with title and headshot if available. This is the single most persuasive element on the page.
- **6. Related Stories:** 2-3 cards linking to other case studies, prioritized by vertical relevance.
- **7. CTA:** See how Converge can deliver similar results with demo booking.

Technical Notes:

- Implement Case Study schema markup.
- Customer approval required for all content before publication.
- Results metrics must be verifiable and approved by customer.

3.6 Resources Section

Resources Hub

Resources Hub

URL	/resources
Purpose	Central hub for all content marketing assets. Drives SEO traffic, captures leads, and establishes thought leadership.
SEO Target	AI lending resources guides
AEO Target	Where can I learn about AI in real estate lending?

Content Blocks (in order):

- **1. Hub Hero:** Headline: Insights for Modern Lenders. Brief description of resource types available.
- **2. Featured Content:** 1-2 editorially selected featured pieces (latest report, flagship guide). Large cards with descriptions.
- **3. Content Type Navigation:** Tabs or segment control: All, Blog, Guides, Webinars, Reports. Each filters the grid below.
- **4. Content Grid:** Cards with: thumbnail, content type badge, title, excerpt, publication date, estimated read time. Paginated or infinite scroll.
- **5. Newsletter Signup:** Inline email capture: Subscribe for weekly lending intelligence. Minimal form: email only. GDPR/CAN-SPAM compliant.

Technical Notes:

- Hub page must support dynamic filtering without full page reload.
- All content must have proper Open Graph tags for social sharing.
- Newsletter signup must integrate with email marketing platform (e.g., HubSpot, Mailchimp).

Blog**Blog**

URL	/blog and /blog/[slug]
Purpose	Primary SEO content engine. Each post targets a specific keyword cluster and links to platform and solution pages.
SEO Target	Varies per post — see content calendar
AEO Target	Varies per post — each post answers a specific question

Content Blocks (in order):

- **1. Blog Index:** Reverse-chronological post listing with category filters: Product Updates, Industry Insights, AI in Lending, Best Practices. Cards with featured image, title, excerpt, author, date, and read time.
- **2. Blog Post Template:** Author byline with headshot and bio. Publication date and last updated date. Estimated read time. Table of contents for posts > 1,500 words. Body content with H2/H3 hierarchy. Inline CTAs (demo booking, related guide download). Related posts section. Social sharing buttons.

Technical Notes:

- Blog must support Article schema markup on every post.
- Posts must support author pages for E-E-A-T signals.
- Implement canonical URLs and proper pagination for index pages.
- Target publishing cadence: 2-4 posts per month at launch.
- Every post must contain at least 2 internal links to platform or solution pages.

Guides (Gated Content)

Long-form, downloadable content assets that capture leads. Examples: The Enterprise Buyer's Guide to AI in Real Estate Lending, How to Implement AI Credit Intelligence Without Disrupting Your Workflow, The CRE Lender's Playbook for AI-Powered Risk Analysis.

Each guide landing page includes: title, description, table of contents preview, key takeaways (3-5), form for download (name, email, company, lending type), and a preview of the first 2-3 pages.

Technical note: Lead capture form must integrate with CRM (HubSpot or Salesforce). Form submissions must trigger automated email sequences. Progressive profiling: returning visitors see shorter forms.

Webinars and Reports

Webinars page serves as both an event listing for upcoming sessions and an on-demand library for past recordings. Reports page hosts downloadable industry data and benchmark publications. Both follow the same card-grid layout as the resources hub.

3.7 Glossary

Glossary

URL	/glossary and /glossary/[term-slug]
Purpose	Pure AEO play. Create definitive, schema-marked definitions for every term at the intersection of AI and real estate lending. Each term page is a standalone answer that AI search engines can cite.
SEO Target	Varies per term — e.g., credit intelligence definition, entity review lending
AEO Target	Varies per term — e.g., What is credit intelligence? What is entity review in commercial lending?

Content Blocks (in order):

- **1. Glossary Index:** Alphabetical listing of all terms. Search bar for quick filtering. Category tags: AI Concepts, Lending Terms, Compliance, Risk Analysis.
- **2. Individual Term Page:** Term as H1. Clear, 2-3 sentence definition that AI engines can extract verbatim. Extended explanation (2-3 paragraphs) with context for real estate lending. Related terms with cross-links. How Converge addresses this (where applicable) with link to relevant agent or platform page.

Technical Notes:

- Every term page must implement DefinedTerm schema markup.
- Launch with minimum 15-20 terms. Target: 50+ terms within 6 months.
- Terms must be reviewed quarterly for accuracy and updated as the market evolves.
- Each term page must include breadcrumb: Home > Glossary > [Term].
- Glossary pages are among the highest-performing AEO assets. Prioritize content quality over quantity.

3.8 Security and Compliance

Security and Compliance

URL	/security
Purpose	Enterprise deal-closer. In regulated lending, security is a purchase requirement, not a differentiator. This page must satisfy the CTO and the compliance officer simultaneously.
SEO Target	AI lending platform security compliance
AEO Target	Is AI credit analysis secure for banks and lenders?

Content Blocks (in order):

- **1. Security Hero:** Headline: Enterprise-Grade Security for Sensitive Lending Data. Compliance badges: SOC 2 Type II, encryption standards, any lending-specific certifications.
- **2. Security Architecture:** Visual diagram of security architecture: data encryption (in transit and at rest), access controls, network security, audit logging. Written for a CTO audience but scannable by a non-technical executive.
- **3. Data Privacy:** How borrower data is handled: data residency (US-only if applicable), retention policies, data deletion processes, CCPA compliance, data processing agreements.
- **4. AI Governance:** Model transparency, bias monitoring, human-in-the-loop architecture, model versioning, audit trail for AI decisions. This is the section that differentiates Converge from vendors who treat AI as a black box.
- **5. Compliance Certifications:** Detailed listing of certifications with dates, scope, and links to reports where available.
- **6. Vendor Assessment Support:** Statement of support for vendor security assessments, questionnaires, and due diligence processes. Link to downloadable security whitepaper or trust center.
- **7. CTA:** Have security questions? Contact our security team directly. Separate from demo booking.

Technical Notes:

- This page must be reviewed by Converge legal and security teams before publication.
- All compliance claims must be current and verifiable.
- Consider linking to a dedicated trust center (e.g., trust.convergefi.com) for detailed documentation.
- Page must not include any information that could be exploited by attackers.

3.9 Pricing

Pricing

URL	/pricing
-----	----------

Purpose	Qualify and disqualify prospects. Help buyers understand the pricing model so they arrive at the demo conversation with realistic expectations.
SEO Target	AI lending platform pricing
AEO Target	How much does AI credit analysis cost for lenders?

Content Blocks (in order):

- **1. Pricing Philosophy:** Brief statement of pricing model (e.g., per-loan, per-agent, platform license). Enough to set expectations without constraining sales flexibility.
- **2. Tier Structure:** 2-3 tiers showing what is included at each level. Tier names should convey value, not just size (e.g., Foundation, Growth, Enterprise). Each tier: list of included agents, volume thresholds, support level, and implementation scope. Primary CTA for each tier: Talk to Sales.
- **3. Custom Enterprise Section:** For large institutions or custom needs: Contact us for custom pricing that accounts for your volume, integration requirements, and compliance needs.
- **4. FAQ:** 4-6 pricing-related questions: How does pricing scale with volume? Are there setup fees? What is the contract term? Can we start with a single agent?
- **5. CTA:** Get a Custom Quote with demo booking. Social proof element: Join X lenders already on Converge.

Technical Notes:

- Pricing page must be reviewed by sales leadership before publication.
- Consider showing enough structure that a buyer can bring a rough budget number to an internal conversation.
- FAQ schema required for the pricing FAQ section.
- Pricing page must not include exact dollar amounts if the sales team requires flexibility.

3.10 Demo Booking

Book a Demo

URL	/demo
Purpose	Primary conversion page. Every CTA across the site points here. Minimize friction. Maximize conversion.
SEO Target	Converge Finance demo AI lending
AEO Target	How can I see a demo of AI credit analysis for lending?

Content Blocks (in order):

- **1. Demo Hero:** Headline: See Converge in Action. Sub-headline: A 30-minute walkthrough of AI-powered credit intelligence, tailored to your lending type.
- **2. Booking Form:** Fields: Full name, work email, company name, job title, lending type (dropdown: bridge, construction, CRE term, DSCR, hard money, other), estimated

monthly loan volume (dropdown: ranges). Maximum 6 fields. No CAPTCHA unless spam becomes a problem.

- **3. What to Expect:** 3-step description: (1) We will walk through the platform with sample documents relevant to your lending type, (2) We will show you how Converge integrates with your existing workflow, (3) We will answer your questions about security, pricing, and implementation.
- **4. Calendar Embed:** Calendly, HubSpot Meetings, or equivalent calendar scheduling widget embedded directly in the page. Buyer should be able to pick a time slot immediately.
- **5. Social Proof:** 1-2 customer quotes or metric callouts. E.g., Our average demo-to-close time is X weeks or Y lenders chose Converge after seeing a demo.
- **6. Alternative Contact:** Prefer email? Reach us at [email]. For the buyer who does not want to fill in a form.

Technical Notes:

- Form must submit to CRM (HubSpot or Salesforce) and trigger notification to sales team within 60 seconds.
- Form must include UTM parameter capture for source attribution.
- Page must support pre-filling from URL parameters (e.g., `lending_type=bridge` from a solution page CTA).
- Calendar embed must show availability in the visitor's local timezone.
- Thank-you confirmation must appear inline (not a redirect) with next-steps messaging.
- Implement conversion tracking: Google Analytics event, LinkedIn Insight tag, and any paid media pixels.

3.11 Company Pages

About

Founding story, mission statement, team bios with headshots. For enterprise lending buyers, domain expertise credibility is critical: highlight team members with lending, fintech, or financial services backgrounds. Include board advisors if they carry industry credibility.

Careers

Job listings page with department filters. Each listing: role title, department, location, brief description, and Apply CTA. Must integrate with ATS (Greenhouse, Lever, or equivalent). Signals growth and ambition to enterprise buyers who want to know the vendor will be around in five years.

Newsroom

Press coverage, product announcements, funding news, partnership announcements. Reverse-chronological listing with category filters. Each entry: headline, publication or source, date, excerpt, and link to full article or press release.

Contact

Direct contact methods for: sales inquiries, customer support, partnerships, press. Physical address if applicable. Response time commitment (e.g., We respond to all inquiries within one business day). Simple contact form with routing by inquiry type.

4. SEO and AEO Strategy

4.1 Keyword Architecture

The keyword strategy is organized in concentric circles: a core cluster around the platform, agent-specific clusters, and vertical-specific clusters. Each page targets a distinct keyword intent to avoid cannibalization.

Cluster	Primary Keywords	Page Targets	Search Intent
Platform Core	AI credit intelligence platform, AI underwriting automation, AI lending technology	Homepage, Platform Overview	Informational, Commercial
Agent: Triage	AI document classification lending, automated loan document processing	/platform/triage	Commercial, Informational
Agent: Credit Intelligence	AI credit risk analysis, automated credit memo, AI risk assessment CRE	/platform/credit-intelligence	Commercial
Agent: Policy Match	automated credit policy compliance, lending guideline automation	/platform/policy-match	Commercial
Agent: Entity Review	entity structure review, guarantor compliance check	/platform/entity-review	Informational, Commercial
Agent: Background Report	AI background check analysis, borrower background risk	/platform/background-report	Informational, Commercial
Agent: Comps	automated property comparables, AI comp analysis CRE	/platform/comps	Commercial
Vertical: Bridge	AI bridge lending, bridge loan underwriting technology	/solutions/bridge-lending	Commercial
Vertical: Construction	AI construction lending, construction loan risk analysis	/solutions/construction-lending	Commercial

Vertical: CRE Term	AI commercial real estate lending, CRE term loan automation	/solutions/cre-term-lending	Commercial
Vertical: DSCR	AI DSCR lending, DSCR underwriting automation	/solutions/dscr-lending	Commercial
Vertical: Hard Money	AI hard money lending, hard money loan automation	/solutions/hard-money-lending	Commercial

4.2 Internal Linking Strategy

The internal linking architecture creates topical clusters that search engines reward. Every page links deliberately within its cluster and to adjacent clusters.

- **Agent pages → Solution pages:** Each agent page links to the 2-3 verticals where that agent is most relevant.
- **Solution pages → Agent pages:** Each solution page links to the agents that matter most for that vertical.
- **Blog posts → Platform and Solution pages:** Every blog post must contain at least 2 internal links to product pages.
- **Glossary → Everything:** Glossary terms link to relevant agent pages, solution pages, and blog posts. This creates deep cross-linkage.
- **Case studies → Agent and Solution pages:** Each case study links to the agents deployed and the relevant vertical page.

4.3 Schema Markup Requirements

Schema Type	Applied To	Purpose
Organization	Homepage	Company identity, logo, social profiles
WebSite	Homepage	Site search, name, URL
Product	Platform Overview, Agent Pages	Product descriptions for AI search
FAQPage	Agent Pages, Solution Pages, Pricing, Glossary	FAQ rich results and AEO extraction
Article	Blog Posts, Guides	Article rich results, E-E-A-T signals
BreadcrumbList	All pages except Homepage	Navigation rich results
DefinedTerm	Glossary Term Pages	Definitions for AEO extraction
CaseStudy (custom)	Customer Story Pages	Social proof in search results
HowTo	How It Works sections	Step-by-step rich results

4.4 AEO-Specific Content Principles

Answer Engine Optimization requires content structured for extraction by AI systems (ChatGPT, Perplexity, Google AI Overviews, Claude). The following principles govern all content on the site:

- Lead every section with a direct, declarative answer to the implied question, then expand with context.
- Write in clear, complete sentences that can stand alone when extracted from context.
- Use consistent, canonical terminology. Do not alternate between credit intelligence and credit analysis randomly. Pick one and use it everywhere.
- Structure content with H2/H3 hierarchy that mirrors how questions are asked naturally.
- Include explicit definitions for key terms on every page where they appear.
- FAQ sections must be genuine questions that real buyers ask, not keyword-stuffed variations of the same question.
- Avoid marketing superlatives (best-in-class, cutting-edge, revolutionary) in favor of specific, verifiable claims.

4.5 Technical SEO Requirements

- XML sitemap auto-generated and submitted to Google Search Console and Bing Webmaster Tools.
- Robots.txt configured to allow all public pages and block internal/admin paths.
- Canonical URLs on every page. Self-referencing canonicals on unique pages.
- Hreflang tags if multi-language support is planned (US English only at launch).
- 301 redirect map from any existing URLs to new URL structure.
- Image alt text on every image, describing content for accessibility and SEO.
- Lazy loading for below-the-fold images with proper width and height attributes to prevent CLS.
- Server-side rendering (SSR) or static site generation (SSG) for all pages to ensure search engine crawlability.
- Page speed target: Lighthouse performance score of 90+ on mobile and desktop.

5. Design System Requirements

The design system must convey: technical sophistication, institutional trust, and product quality. Converge aspires to Anthropic-grade design. That means: clean, confident, minimal, and information-dense without feeling cluttered.

5.1 Design Principles

- **Clarity over decoration:** Every visual element must serve a purpose. Remove anything that does not aid comprehension or conversion.
- **Data-forward:** The product handles complex financial data. The website should feel like a product that respects the buyer's intelligence and analytical mindset.
- **Institutional trust:** Color palette, typography, and layout should signal enterprise-grade reliability. No startup-playful aesthetics.

- **Consistent interaction patterns:** Every button, form, card, and navigation element behaves predictably across pages.
- **Accessible by default:** WCAG 2.1 AA compliance is not a stretch goal. It is a baseline requirement.

5.2 Typography

Element	Font	Size / Weight	Usage
H1 / Page Title	Inter or equivalent sans-serif	48-56px / Bold (700)	One per page, hero sections
H2 / Section Title	Inter	32-40px / Semibold (600)	Major page sections
H3 / Subsection	Inter	24-28px / Semibold (600)	Content subsections, card titles
Body	Inter	16-18px / Regular (400)	Paragraph text, descriptions
Caption / Meta	Inter	14px / Regular (400)	Dates, labels, secondary info
Code / Technical	JetBrains Mono or equivalent	14-16px / Regular (400)	API references, technical specs

5.3 Color Palette (TBD)

Color Name	Hex Value	Usage	Accessibility Notes

5.4 Component Library

The following core components must be designed and built before page development begins:

Component	Variants	Usage Notes
Button	Primary (teal, filled), Secondary (navy, outlined), Ghost (text only), Disabled	Primary CTA: Book a Demo. All buttons must have hover, active, focus, and disabled states.
Navigation Bar	Desktop (horizontal), Mobile (hamburger menu), Sticky on scroll	Must support mega-menu dropdown for Platform section.
Card	Agent card, Solution card, Case study card, Blog post card, Resource card	All cards must have hover state with subtle elevation change.
Hero Section	Homepage hero, Page hero (shorter), Agent hero (with icon)	Must be responsive: stack vertically on mobile.
Form	Demo request, Newsletter signup, Contact, Guide download	Inline validation, loading states, success/error states.
FAQ Accordion	Single open, multiple open	Must render properly for FAQ schema markup extraction.
Workflow Diagram	Full platform, Single agent, Vertical-specific	Interactive on desktop, static on mobile. SVG-based.
Metric Callout	Large number, Before/after comparison, Percentage	Used in case studies, solution pages, homepage.
Social Proof Bar	Logo strip (4-8 logos), Quote with attribution	Grayscale by default, optional color on hover.
Footer	Four-column with sub-navigation, badges, social links	Consistent across all pages.
Breadcrumb	Text breadcrumb with separator	All pages except homepage.
Alert / Banner	Announcement (top of page), Cookie consent, Success message	Dismissible, does not shift page layout on dismiss.

5.5 Responsive Breakpoints

Breakpoint	Width	Layout	Notes
Mobile	< 768px	Single column, stacked	Navigation collapses to hamburger. Cards stack vertically.
Tablet	768-1024px	Two column where applicable	Agent cards in 2-column grid.
Desktop	1025-1440px	Full layout	Primary design target.
Wide	> 1440px	Max-width container (1280px centered)	Content does not stretch beyond 1280px.

6. Technical Architecture

6.1 Technology Stack (Recommended)

Layer	Recommended Technology	Rationale
Framework	Next.js 14+ (App Router)	SSR/SSG for SEO, React ecosystem, Vercel deployment, excellent performance
Language	TypeScript	Type safety, developer productivity, reduced runtime errors
Styling	Tailwind CSS + CSS Modules	Utility-first for speed, CSS Modules for component isolation
CMS	Sanity, Contentful, or Storyblok	Headless CMS for blog, glossary, case studies. Non-developer content management
Hosting	Vercel or AWS CloudFront + S3	Edge deployment, automatic SSL, global CDN, preview deployments
Analytics	Google Analytics 4 + Segment	GA4 for traffic. Segment for event routing to multiple destinations
Forms	HubSpot Forms or custom + HubSpot API	CRM integration, lead scoring, automated sequences
Search	Algolia or Fuse.js	Site search for blog, glossary, resources. Algolia for scale, Fuse for simplicity
Email	HubSpot or Customer.io	Drip campaigns, newsletter, lead nurture sequences
Monitoring	Vercel Analytics + Sentry	Performance monitoring, error tracking, Core Web Vitals
A/B Testing	Vercel Edge Config or LaunchDarkly	Feature flags and experimentation for CTA optimization
Calendar	Calendly or HubSpot Meetings	Demo booking with timezone detection and team routing

6.2 Accessibility Requirements

All pages must comply with WCAG 2.1 Level AA. The following requirements are non-negotiable:

- All interactive elements must be keyboard accessible with visible focus indicators.
- All images must have meaningful alt text. Decorative images must have empty alt attributes.
- Color contrast ratios must meet WCAG AA: 4.5:1 for normal text, 3:1 for large text.
- All forms must have associated labels. Error messages must be programmatically associated with fields.
- Page must be navigable with screen readers (NVDA, VoiceOver, JAWS).

- Skip navigation link must be present on every page.
- ARIA landmarks must be used for page regions: banner, navigation, main, contentinfo.
- Motion and animation must respect prefers-reduced-motion media query.
- Touch targets must be at least 44x44px on mobile.

6.3 Security Requirements

- HTTPS enforced on all pages with HSTS header.
- Content Security Policy (CSP) header configured to prevent XSS.
- All forms must implement CSRF protection.
- No sensitive data in URL parameters (use POST for form submissions).
- Cookie consent banner compliant with CCPA. GDPR only if serving EU traffic.
- Third-party scripts must be audited and loaded asynchronously.
- Subresource Integrity (SRI) for CDN-loaded scripts.
- Regular dependency vulnerability scanning (npm audit, Snyk, or Dependabot).

6.4 CMS Content Model

The headless CMS must support the following content types with their respective fields:

Content Type	Fields	Notes
Blog Post	title, slug, author (ref), category, featured_image, excerpt, body (rich text), seo_title, seo_description, published_date, updated_date, related_posts (ref[])	Support draft/published states and scheduled publishing
Case Study	title, slug, customer_name, customer_logo, landing_vertical, challenge (rich text), solution (rich text), results (structured: metric, value, context), quote (text + attribution), featured_image	Requires customer approval workflow
Glossary Term	term, slug, short_definition, extended_definition (rich text), related_terms (ref[]), related_agent (ref), category	Schema markup auto-generated from fields
Guide	title, slug, description, cover_image, key_takeaways (text[]), pdf_file, form_id, preview_pages (image[])	Gated: requires form submission to download
Agent Page	name, slug, icon, one_liner, problem_statement (rich text), how_it_works (structured steps), capabilities (structured blocks), example_output (rich text), faqs (structured)	Template-driven: same layout, different content
Solution Page	vertical_name, slug, hero_headline, pain_points (rich text),	Must link to relevant agent pages

	agent_relevance (ref[]), workflow (structured steps), metrics (structured), faqs (structured)	
Webinar	title, slug, date, speakers (structured), description, recording_url, registration_url, status (upcoming/on-demand)	Upcoming shows registration CTA; past shows recording
Team Member	name, title, headshot, bio, linkedin_url, is_leadership (bool)	Used on About page and as blog post author reference

7. Analytics and Tracking

7.1 Analytics Architecture

All analytics events flow through a single event layer (Segment or equivalent) that routes to downstream destinations: Google Analytics 4, CRM (HubSpot/Salesforce), ad platforms, and any future tools. This prevents vendor lock-in and ensures consistent event definitions.

7.2 Event Taxonomy

Event Name	Trigger	Properties	Destinations
page_viewed	Every page load	page_path, page_title, referrer, utm_params	GA4, Segment
cta_clicked	Any CTA button click	cta_text, cta_location, destination_url	GA4, Segment
demo_form_started	User focuses on first form field	form_location, landing_type (if pre-selected)	GA4, HubSpot
demo_form_submitted	Successful form submission	landing_type, company_name, volume_range, utm_source	GA4, HubSpot, LinkedIn, Google Ads
guide_downloaded	Gated content form submission	guide_title, guide_slug	GA4, HubSpot
newsletter_subscribed	Newsletter form submission	email_hash, source_page	GA4, HubSpot
agent_page_viewed	Agent page load	agent_name, referrer_page	GA4, Segment
solution_page_viewed	Solution page load	vertical_name, referrer_page	GA4, Segment
case_study_viewed	Case study page load	customer_name, landing_vertical	GA4, Segment

faq_expanded	FAQ accordion opened	question_text, page_path	GA4
glossary_term_viewed	Glossary term page load	term, referrer (search engine if organic)	GA4, Segment
pricing_page_viewed	Pricing page load	referrer_page, time_on_site_before	GA4, HubSpot
video_played	Video play initiated	video_title, page_path, play_percentage	GA4
outbound_link_clicked	Click on external link	destination_url, link_text	GA4

7.3 Conversion Tracking

The primary conversion event is demo_form_submitted. The following conversion pixels and tags must be implemented:

- Google Ads conversion tracking (if running paid campaigns).
- LinkedIn Insight Tag with conversion event for demo submissions.
- Google Analytics 4 conversion event configuration.
- HubSpot tracking code for lead source attribution.
- Facebook/Meta pixel (if running social campaigns).

All conversion tags must fire server-side where possible to avoid ad blocker impact. Client-side fallback for browsers without ad blockers.

7.4 Dashboards and Reporting

The following dashboards must be created and maintained:

- **Traffic Dashboard:** Sessions, users, page views, traffic sources, top pages, bounce rate by page type.
- **Conversion Dashboard:** Demo requests by source, conversion rate by page, form abandonment rate, pipeline attribution.
- **Content Performance:** Blog post traffic, time on page, scroll depth, guide downloads, newsletter signups.
- **SEO Dashboard:** Organic traffic, keyword rankings (top 20 targets), domain rating, backlink growth, indexed pages.
- **AEO Dashboard:** AI citation mentions (manual tracking monthly), glossary page traffic from AI referrers, brand mention monitoring.

8. Content Production Plan

8.1 Launch Content Requirements

The following content must be complete before the website launches. This is the minimum viable content set: launching with less will create a thin-content problem that harms SEO and enterprise credibility.

Content Piece	Count	Owner	Dependencies
Homepage copy	1 page	Marketing + Product	Brand guidelines, value proposition finalized
Platform Overview	1 page	Product	Architecture diagram, integration list
Agent Pages	6 pages	Product + Engineering	Agent capabilities confirmed, example outputs created
Solution Pages	3 pages (bridge, construction, CRE term)	Marketing + Sales	Vertical-specific pain points validated with customers
Customer Case Studies	2-3 stories	Marketing + Customer Success	Customer approval, quantified results verified
Blog Posts	5-8 posts	Marketing	Keyword research completed, editorial calendar approved
Glossary Terms	15-20 terms	Product + Marketing	Canonical terminology agreed
Security Page	1 page	Security + Legal	Compliance certifications current, security architecture reviewed
Pricing Page	1 page	Sales + Finance	Pricing model finalized, tier structure approved
About Page	1 page	Marketing	Team bios and headshots collected
Legal Pages	3 pages (privacy, terms, security policy)	Legal	Legal review completed

8.2 Ongoing Content Cadence

Content Type	Frequency	Ownership	Purpose
Blog Posts	2-4 per month	Marketing	SEO traffic, thought leadership
Glossary Terms	3-5 per month	Product + Marketing	AEO coverage expansion
Case Studies	1 per quarter	Customer Success	Social proof, vertical coverage

Solution Pages	1 new vertical per quarter	Marketing + Sales	Expand vertical coverage (add DSCR, hard money)
Guides	1 per quarter	Marketing	Lead generation, gated content
Webinars	1 per month	Marketing + Product	Engagement, lead capture
Industry Reports	1-2 per year	Product + Data	Authority building, PR
Product Updates	As shipped	Product	Existing customer engagement, SEO

8.3 Content Quality Standards

- All content must be reviewed by at least one domain expert (lending or product) before publication.
- Blog posts must be minimum 1,200 words for SEO value. Glossary terms must be minimum 300 words.
- No content may use unverified statistics or fabricated benchmarks. All data claims must cite sources.
- Content must avoid generic AI marketing language: best-in-class, cutting-edge, revolutionary, game-changing. Use specific, verifiable claims instead.
- All content must include internal links to at least 2 other site pages.
- Content must be updated or audited every 6 months for accuracy and relevance.

9. Launch and Rollout Plan

9.1 Phased Delivery

Phase	Scope	Key Deliverables	Duration
Phase 1: Foundation	Design system, component library, CMS setup, analytics instrumentation	Figma design system, React component library, CMS configured with content models, GA4 + Segment installed	3-4 weeks
Phase 2: Core Pages	Homepage, Platform Overview, 6 Agent Pages, Demo Booking, Security, Pricing	All core pages built, responsive, accessible, SEO-ready. Demo form integrated with CRM. Schema markup implemented.	4-5 weeks
Phase 3: Verticals and Content	3 Solution Pages, Customer Stories, About, Contact, Legal pages	Vertical pages with distinct content. Minimum 2 case studies published. Company pages complete.	3-4 weeks

Phase 4: Content Engine	Blog, Resources Hub, Glossary, Newsletter	Blog infrastructure, 5-8 launch posts, 15-20 glossary terms, newsletter signup integrated.	3-4 weeks
Phase 5: QA and Launch	Cross-browser testing, accessibility audit, performance optimization, 301 redirects, launch	All pages pass WCAG AA. Core Web Vitals met. Redirect map active. Search Console and Bing submitted. Production launch.	2-3 weeks

Total estimated timeline: 15-20 weeks from kickoff to production launch.

9.2 Pre-Launch Checklist

- All pages pass WCAG 2.1 AA accessibility audit (automated + manual).
- All pages score 90+ on Google Lighthouse (performance, accessibility, SEO, best practices).
- All forms tested end-to-end: submission, CRM delivery, email confirmation, sales notification.
- All schema markup validated using Google Rich Results Test.
- XML sitemap submitted to Google Search Console and Bing Webmaster Tools.
- 301 redirect map from old URLs to new URLs implemented and tested.
- Open Graph tags and social sharing tested for all page types.
- Cross-browser testing: Chrome, Firefox, Safari, Edge (latest 2 versions each).
- Mobile testing: iOS Safari, Android Chrome (latest 2 versions each).
- Cookie consent banner tested for CCPA compliance.
- Security headers configured: HSTS, CSP, X-Frame-Options, X-Content-Type-Options.
- Error pages (404, 500) designed and implemented.
- Favicon and web app manifest configured.
- DNS and SSL configured for production domain.

9.3 Post-Launch Monitoring

For the first 30 days after launch, the following must be monitored daily:

- Core Web Vitals via Google Search Console and Vercel Analytics.
- Form submission success rate and CRM delivery confirmation.
- 404 error rate and top 404 paths (from redirect gaps).
- Google Search Console indexing status and crawl errors.
- Traffic patterns and conversion rate by source.
- JavaScript errors via Sentry or equivalent.

10. Success Metrics and Governance

10.1 Key Performance Indicators

The website is measured against four outcome categories. Each has leading indicators (measured weekly) and lagging indicators (measured monthly and quarterly).

Conversion

Metric	Leading Indicator	Target
Demo requests per month	CTA click-through rate	40 at Month 6, 120 at Month 12
Form conversion rate	Form start rate, form abandonment rate	> 15% of /demo visitors submit
Demo-to-opportunity rate	Lead quality score (from sales)	> 40% of demos become opportunities
Pipeline sourced from website	Monthly attributed pipeline value	> 30% of total pipeline from website by Month 12

Traffic and Engagement

Metric	Leading Indicator	Target
Organic sessions per month	Indexed pages, keyword rankings	5,000 at Month 6, 25,000 at Month 12
Average session duration	Scroll depth, pages per session	> 3 minutes at Month 6
Bounce rate (platform pages)	Hero engagement, scroll to section 2	< 45% at Month 6
Return visitor rate	Newsletter signups, content engagement	> 20% of visitors are returning

SEO and AEO

Metric	Leading Indicator	Target
Domain Rating	Backlink acquisition, content publishing	DR 25 at Month 6, DR 45 at Month 12
Keywords ranking page 1	Content depth, internal linking	20+ keywords at Month 6, 60+ at Month 12
AEO citations	Glossary traffic, definitional content quality	10+ AI citations at Month 6, 50+ at Month 12
Glossary term traffic	Term count, schema quality	500 monthly sessions from glossary at Month 6

Technical Health

Metric	Leading Indicator	Target
Lighthouse score (mobile)	Bundle size, image optimization	> 90 consistently
LCP	Image loading, server response time	< 2.5s on mobile
Uptime	Hosting reliability, error rate	99.9%

Accessibility score	WCAG compliance, component testing	100% WCAG AA compliant
----------------------------	------------------------------------	------------------------

10.2 Review Cadence

- **Weekly:** Traffic, conversion rate, form submissions, top-performing content, error monitoring.
- **Monthly:** Full dashboard review, SEO ranking movement, content performance, pipeline attribution.
- **Quarterly:** Strategic review against targets, content audit, technical performance audit, competitive analysis update, roadmap adjustments.

10.3 Ownership

Workstream	Owner	Accountability
Overall Website Performance	Head of Marketing	Conversion targets, traffic growth, content quality
Technical Health	Engineering Lead / Web Developer	Performance, uptime, security, accessibility
Content Production	Content Lead / Marketing Manager	Publishing cadence, SEO targets, content quality
SEO and AEO	SEO Lead or Agency Partner	Keyword rankings, domain rating, schema implementation
Design System	Product Designer	Component library, brand consistency, UX quality
Sales Alignment	Sales Leader	Lead quality feedback, demo experience, pricing page accuracy
Analytics and Reporting	Marketing Operations	Event tracking, dashboard maintenance, attribution accuracy

11. Risks and Dependencies

11.1 Risk Register

Risk	Likelihood	Impact	Mitigation	Owner
Insufficient customer case studies at launch	High	High	Start customer outreach immediately. Offer incentives for early participation. Launch with 2 minimum and add quarterly.	Customer Success

Content quality inconsistency	Medium	High	Establish style guide and review process before content production begins. All content reviewed by domain expert.	Content Lead
Technical SEO issues post-launch	Medium	High	Dedicated SEO QA in Phase 5. Automated monitoring for indexing, crawl errors, and Core Web Vitals regressions.	Engineering Lead
Agent capability changes during build	Medium	Medium	CMS-driven content for agent pages allows rapid updates without engineering changes.	Product
Form integration failure	Low	Critical	End-to-end testing of all form flows in staging. Fallback email delivery if CRM integration fails.	Engineering Lead
Competitive website launch	Medium	Medium	Differentiate on content depth, AEO strategy, and design quality. Monitor competitor sites monthly.	Marketing
Scope creep during build	High	Medium	Strict phase gates. No new pages added without PRD amendment and timeline reassessment.	Project Manager

11.2 External Dependencies

- Customer approvals for case study content (2-4 week lead time per customer).
- SOC 2 certification status and documentation availability from security team.
- Pricing model finalization from sales and finance leadership.
- Brand guidelines and logo assets (high-resolution, multiple formats).
- CRM system (HubSpot or Salesforce) setup and API access.
- Calendar scheduling tool (Calendly or equivalent) account and configuration.
- Legal review of privacy policy, terms of service, and cookie consent.
- Domain DNS configuration and SSL certificate provisioning.

12. Appendices

Appendix A: Competitive Website Benchmarks

The following enterprise AI platforms should be benchmarked for design quality, content depth, and SEO/AEO strategy during the design phase:

- Anthropic (anthropic.com) — Design quality benchmark. Clean, confident, data-forward.
- Stripe (stripe.com) — Developer-focused enterprise site. Best-in-class documentation and product pages.
- Plaid (plaid.com) — Financial infrastructure positioning. Strong use case pages.
- Blend (blend.com) — Lending-specific AI/automation. Direct competitor in messaging if not product.
- Oculous (oculus.com) — Document automation for lending. Competitive overlap on Triage and extraction.

Appendix B: Glossary Launch Terms (Initial 20)

The following terms should be defined and published at launch:

Term	Primary Keyword Target
Credit Intelligence	credit intelligence definition
Entity Review	entity review commercial lending
Property Comparables (Comps)	property comparable analysis
DSCR (Debt Service Coverage Ratio)	DSCR definition lending
AI Underwriting	AI underwriting definition
Credit Memo	credit memo real estate lending
Loan-to-Value Ratio (LTV)	LTV ratio explained
Bridge Loan	bridge loan definition
Construction Draw Schedule	construction draw schedule
Background Report (Lending)	background report lending compliance
Policy Compliance (Lending)	credit policy compliance
Document Classification	document classification lending
Guarantor Requirements	guarantor requirements CRE
Risk Layering	risk layering lending
Borrower Analysis	borrower analysis commercial lending
Automated Underwriting System	automated underwriting system
Commercial Real Estate (CRE)	CRE definition
Hard Money Loan	hard money loan explained
Loan Origination System (LOS)	LOS lending technology
Product-Market Fit (PMF) for AI	AI product market fit lending

Appendix C: How to Use This Document

This PRD is designed to be a living reference throughout the website build. Here is how each stakeholder should use it:

- **Product Manager:** Use Sections 1-4 (Executive Summary, Information Architecture, Page Specs, SEO/AEO) as the source of truth for what gets built and why. Reference during sprint planning and design reviews.
- **Designer:** Use Section 5 (Design System) and Section 3 (Page Specs) to understand content blocks, component requirements, and responsive behavior. Section 12 (Appendix A) provides competitive benchmarks for design quality.
- **Engineer:** Use Section 6 (Technical Architecture) for stack decisions, performance targets, and CMS configuration. Section 7 (Analytics) for event implementation. Section 9 (Launch Plan) for phasing and pre-launch checklist.
- **Content Team:** Use Section 8 (Content Production Plan) for launch requirements, ongoing cadence, and quality standards. Section 3 (Page Specs) for content block details. Section 4 (SEO/AEO) for keyword targets.
- **Marketing Leader:** Use Section 10 (Success Metrics) for KPIs, review cadence, and ownership matrix. Section 1 (Executive Summary) for stakeholder alignment. Section 11 (Risks) for proactive mitigation.

End of Document
